

Alex Andersson

Software Engineering Manager | AI Lead

Stockholm, Sweden | alex.andersson@example.com | example.com/alex-andersson | [alex.example](#)

Summary

Hands-on Software Engineering Manager with 15+ years across SaaS, e-commerce and product engineering. Leads as both line manager and player-coach: hiring, coaching, delivery and team health, while staying close enough to the code to challenge assumptions and remove friction. A recurring theme is modernization — core business systems and long-lived products that had to keep running while they were being changed. Currently focused on AI and agentic engineering: orchestration, evaluation, context engineering and RAG, and on building the engineering practices around them rather than only adding AI tools.

Core Competencies

Leadership: Line management, team building, coaching and mentoring, technical recruitment, cross-functional team leadership, stakeholder communication, technology and product strategy, annual KPI setting

Delivery: Agile and Scrum, Scrum Master, incremental modernization, technical debt reduction, on-call and incident process, performance optimization, engineering culture and developer experience

AI Engineering: Agentic development practices, agent orchestration, AI evaluation and observability, context engineering, RAG and knowledge systems, model routing and cost/performance trade-offs, AI governance and responsible adoption

Experience

Software Engineering Manager, Acme Documentation

Stockholm, Sweden | Apr 2024 - Aug 2025

- Led a cross-functional team of eight, including a UX designer and a product manager, delivering Acme Documentation's Next-Generation Editor.
- Diagnosed and fixed multiple N+1 select problems in the editor; the worst cut a single request from roughly 5,000 MySQL queries and 10 seconds to one query in under a second.
- Removed 30,000 lines of dead code as part of a sustained technical debt reduction effort, alongside ongoing feature delivery.
- Ran agentic development workshops for two engineering teams, around 15 developers, covering context engineering, AI-assisted development, context pollution and its effect on output accuracy, and agent skills.
- Built a prototype MCP tool during a company creative day, making product content and authoring usable inside AI harnesses such as Claude Desktop, including its own UI rendered inside Claude.

Technology: TypeScript, React, MySQL, MCP, AI tooling

Software Engineering Manager, Example Telecom

Sweden | Aug 2023 - Jan 2024

- Led a cross-functional team of six: three backend engineers and three native mobile developers.
- Oversaw development of a strategic feature on a tight deadline, resulting in new revenue opportunities.

- Connected the company's Confluence content to its enterprise ChatGPT, giving employees access to internal documentation through chat.

Technology: Azure, AWS, C#, Next.js, Swift, Kotlin

Software Engineering Manager, Example Groceries

Stockholm, Sweden | Jul 2022 - Apr 2023

- Line-managed a team of five experienced developers while contributing code as a React developer on the delivery system.
- Implemented an on-call procedure with support from the department director.
- Ran a weekly rotating team responsibility for daily meetings and support.
- Fostered mentoring, technical leadership and pragmatic agile management within the team.

Technology: AWS, C#, TypeScript, serverless, React, Next.js

Senior Frontend Developer, Example Advertising

Stockholm, Sweden | Jan 2018 - Jul 2022

- Built Angular applications across Display Ad Analytics, Campaign Manager, Scheduling, Feed Automation and Creative Editor, with a strong focus on code quality, automated testing and engineering practice.
- Participated in the architecture steering group, working with microservices, event-bus architecture and an initiative to containerize product features.
- Worked with Azure and Azure DevOps using ARM templates and Bicep, followed later by a migration to GitHub Actions.
- Contributed to C# code when needed and supported debugging and issue investigation.
- Led frontend forum initiatives for a group of 8-15 frontend developers, including a co-presented demo on state management using RxJS observables in a Redux-like design.
- Served as Scrum Master in later years, facilitating agile ceremonies and improving team collaboration.

Technology: Angular, TypeScript, C#, Azure, Azure DevOps, microservices

Developer and Consultant, Freelance

Gothenburg, Sweden | Dec 2014 - Jun 2017

- Delivered website development, Android application development, e-commerce consulting and gamification work for a range of clients.
- Occasionally gave workshops on web development fundamentals.

Technology: JavaScript, Angular, Node.js, Sass, Java, PHP, iOS, Kotlin

Developer, Example Mobile Studio

Gothenburg, Sweden | 2010 - Dec 2014

- Started as a web developer and progressed into mobile development and team leadership responsibilities.
- Worked across backend and frontend development, web services and mobile applications.

Technology: PHP, Android/Java, JavaScript, C#, Flex/ActionScript, OpenCart, Drupal, MySQL, PostgreSQL, ArcGIS

Technical Skills

AI and Agentic Systems: Model Context Protocol (MCP), Agent2Agent (A2A), Retrieval-Augmented Generation (RAG), AI evaluation, context engineering, vector databases, AI automation, AI governance

AI and Developer Tools: Claude Code, Codex, OpenCode, Hermes Agent, Agent Runner, OpenAI API, OpenRouter, LangChain, Promptfoo, custom GPTs

Architecture: System design, distributed systems, API design, microservices, serverless, event-driven architecture, performance optimization, design patterns

Languages: TypeScript, JavaScript, SQL, Python, Go, Rust, Dart, C#, PHP, Java, C++

Runtimes and Frameworks: Node.js, Bun, React, Next.js, Angular, Express, Fastify, .NET, SST, Flutter

Cloud and Platforms: Cloudflare, AWS, Azure, Supabase, Firebase, GitHub Actions, Azure DevOps

Testing and Evaluation: Playwright, Vitest, Jest, Cypress, Puppeteer, k6, PactFlow, Promptfoo, Gherkin/BDD

Projects

Example AI Labs — Builds and publishes open-source AI developer tooling around agent evaluation, observability and developer workflows.

focus-assist — Open-source agent skill that reduces cognitive load and supports decision-making when someone is juggling too much context. github.com/example/focus-assist

Education

Example University | Gothenburg, Sweden

BSc (Bachelor of Science), Computer Software Engineering | 2004 - 2009

Languages

English: Full professional proficiency

Swedish: Native proficiency

Outside Work

Enjoys hiking, photography, cooking and reading fiction. Builds small side projects and experiments with generative AI for image, video and voice.
